EXAMINER

WALSH, JOHN B

ART UNIT PAPER NUMBER

2151

DATE MAILED: 03/16/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b> 10/016,857	<b>Applicant(s)</b> GIOBBI, JOHN J.	
	<b>Examiner</b> John B. Walsh	<b>Art Unit</b> 2151	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) ☐ Responsive to communication(s) filed on \_\_\_\_.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) ☒ Claim(s) 1-35 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-35 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

#### Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)  
Paper No(s)/Mail Date 5/1/02;12/14/2001.
- 4) ☐ Interview Summary (PTO-413)  
Paper No(s)/Mail Date. \_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_.

## DETAILED ACTION

### *Claim Objections*

1. Claims 16 and 17 are objected to because of the following informalities: Claim 16 is dependent upon itself. Claim 17 recites the content formatted as a CD, DVD, electronic book or software which are not data formats. A CD and DVD are physical devices for storing data which may be stored in multiple formats. An electronic book and software are not specific formats. Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 1-7, 9, 14-24, 26 and 31-33 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. Patent No. 6,804,825 to White et al.

As concerns claim 1, a centralized digital content distribution system for use in an establishment, comprising: a digital content server (12) for storing digital content acquired from a global computer network (16); a plurality of remote clients (14) located in rooms of the establishment and linked to the digital content server; and a portable remote control (52) for communicating with each of the remote clients and selecting the digital content stored in the digital content server.

Art Unit: 2151

As concerns claim 2, the system of claim 1, wherein the selected digital content is downloaded from the digital content server to one of the remote clients (column 11, lines 4-5, transmitted from server to client) and converted by the remote client to a playable format (converted from electrical signals into a playable format).

As concerns claim 3, the system of claim 2, wherein the playable format is compatible with a standard component (TV, column 1, line 25) connected to the remote client.

As concerns claim 4, the system of claim 1, wherein the digital content server converts the selected digital content to a playable format compatible with a standard component coupled to the digital content server (column 2, lines 29-30; column 2, lines 63-64, decoder 62).

As concerns claim 5, the system of claim 1, wherein the remote clients are linked to the digital content server via a distribution hub (24, 20), and the remote clients are linked to the distribution hub by a backbone transmission network (column 3, line 33, various communication links which entail backbone transmission, column 10, lines 40-46).

As concerns claim 6, the system of claim 1, wherein the remote control includes means for establishing a first wireless transmission link (54) with each of the remote clients (similar TV's wherein the remote has it's IR code, remote will work for more than one tv).

As concerns claim 7, the system of claim 6, wherein the remote control is enabled to display (enabled to display on the tv) and select (column 4, lines 22-23, 30-38) the digital content available on the digital content server upon establishing the first wireless transmission link with one of the remote clients.

As concerns claim 9, the system of claim 6, wherein the first wireless transmission link is selected from a group consisting of a radio link and an infrared link (54, column 2, 62).

Art Unit: 2151

As concerns claim 14, the system of claim 1, wherein one or more of the remote clients are integrated into respective standard components (integrated with tv, column 3, lines 14-15).

As concerns claim 15, the system of claim 1, wherein the remote control is adapted to control the digital content server to acquire the digital content from the global computer network (remote control adapted to control menu on screen to access and control the database for downloading digital content).

As concerns claim 16, the system of claim 16, wherein the remote control is adapted to sort and categorize (column 4, lines 22-23, when searching the database the remote control is adapted to sort and categorize) the digital content on the digital content server.

As concerns claim 17, the system of claim 1, wherein the digital content is formatted as a compact disc (CD), digital video disc (DVD), MP3, electronic book, or software (column 3, line 25, mp3 format).

As concerns claim 18, a centralized digital content distribution method for use in an establishment, comprising: storing digital content acquired from a global computer network at a digital content server (12); positioning a plurality of remote clients (14) in rooms of the establishment and linking the remote clients to the digital content server; and selecting the digital content stored at the digital content server by communicating with one of the remote clients with a remote control (52).

As concerns claim 19, the method of claim 18, further including downloading (column 11, lines 4-5, transmitted from server to client) the selected digital content from the digital content server to one of the remote clients and converting the downloaded digital content to a playable format (column 2, lines 29-30, column 2, lines 63-64, decoder 62).

Art Unit: 2151

As concerns claim 20, the method of claim 19, wherein the playable format is compatible with a standard component (TV, column 1, line 25) connected to the remote client.

As concerns claim 21, the method of claim 18, further including converting, at the digital content server, the selected digital content to a playable format compatible with a standard component coupled to the digital content server (column 2, lines 29-30; data converted into MPEG format compatible with the terminal 14).

As concerns claim 22, the method of claim 18, wherein the step of positioning a plurality of remote clients in rooms of the establishment and linking the remote clients to the digital content server includes linking the remote clients to the digital content server via a distribution hub (24, 20) and linking the remote clients to the distribution hub by a backbone transmission network (column 3, line 33, various communication links which entail backbone transmission; column 10, lines 40-46).

As concerns claim 23, the method of claim 18, further including establishing a first wireless transmission link (54) between the remote control and one of the remote clients.

As concerns claim 24, the method of claim 23, further including enabling the remote control to display (enabled to display on the tv) and select (column 4, lines 22-23 and 30-38) the digital content available on the digital content server upon establishing the first wireless transmission link between the remote control and one of the remote clients.

As concerns claim 26, the method of claim 23, wherein the first wireless transmission link is selected from a group consisting of a radio link and an infrared link (column 2, line 62).

As concerns claim 31, the method of claim 18, further including controlling the digital content server with the remote control to acquire the digital content from the global computer network (remote control adapted to control menu on screen to access and control the database for downloading digital content).

As concerns claim 32, the method of claim 31, wherein the step of controlling the digital content server with the remote control includes controlling the digital content server to sort and categorize (column 4, lines 22-23, when searching the database the remote control is adapted to sort and categorize) the digital content on the digital content server.

As concerns claim 33, a centralized digital content distribution system for use in an establishment, comprising: a digital content server (12) for storing digital content acquired from a global computer network and converting the digital content to a playable format (column 2, lines 29-30); a plurality of remote standard components (iv, column 3, lines 14-15) located in rooms of the establishment and linked to the digital content server; and a portable remote control (52) for communicating with each of the standard components and selecting the digital content to be converted by the digital content server to the playable format.

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 2151

5. Claims 8 and 25 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,804,825 to White et al. as applied above in view of U.S. Patent No. 6,104,334 to Allport.

White et al. '825 do not explicitly disclose the remote control including a display.

Allport '334 teaches a remote control including a display (figure 3).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the remote control of White et al. '825 with a display, as taught by Allport '334, in order to provide a remote control that does not interfere with the tv or main viewing screen.

6. Claims 10, 11, 27 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,804,825 to White et al. as applied above in view of U.S. Patent No. 6,401,059 to Shen et al.

White et al. '825 do not explicitly disclose the remote control will control the standard components upon establishing a second wireless transmission link.

It is well known in the art for a single remote control to operate multiple devices, as taught by Shen et al. (figure 1B).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the remote control of White et al. '825 with universal remote functionality, as taught by Shen et al. '059, in order to provide a more efficient system having fewer parts.

Art Unit: 2151

7. Claims 12, 13, 29, 30, 34 and 35 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,804,825 to White et al. as applied above in view of U.S. Patent No. 6,667,684 to Waggamon et al.

White et al. '825 do not explicitly disclose encrypting and decrypting the digital content and a key code.

It is well known in the art to provide encryption, decryption and key codes for security, as taught by Waggamon et al. (abstract).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to provide the remote control of White et al. '825 with encryption, decryption and key codes, as taught by Waggamon et al., in order to provide security and prevent unauthorized access of the digital content.

### *Conclusion*

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John B. Walsh whose telephone number is 571-272-7063. The examiner can normally be reached on Monday-Friday from 6:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Zarni Maung can be reached on 571-272-3939. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
